

PIEZOELECTRIC BUZZER

Piezoelectric Buzzer

muRata

This is unified piezoelectric sounder which has piezoelectric diaphragm of 3 terminals connected to self drive circuit, and it easily generates sound with only a DC power supply (3.0-20Vdc). Using suitably designed resonant system, this type can be used where large sound volumes are needed.

■ APPLICATIONS

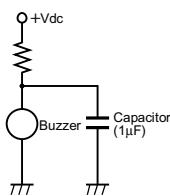

- Gas alarms, burglar alarms.
- Air conditioners, microwave ovens and various types of microcomputer controlled home-electronic appliances.
- Automobile speed alarms, navigators, car stereos and other automobile equipment.
- Toys, games, and other simple electronic devices such as teaching aids.

■ CIRCUITS

This type of piezoelectric buzzer is built in complete circuit ; so there is no need for another circuit for generating sound.

Resistors should not be connected in series to the power supply as this will produce irregular oscillation.

When resistor is necessary to control sound volume, use capacitor ($1\mu F$) parallel with the buzzer together.

■ NOTICE

Please pay attention to following points in order piezoelectric sounder to maintain stable oscillation.

- (1) Do not cover the hole with tape or other obstacles.
- (2) There should not be any obstacle within 15mm from top of buzzer.
- (3) Please use these piezoelectric buzzer within the limit of rated voltage. Consult us if higher voltage type is required.
