

This cooling agent is chemically pure and non-toxic.

It is used for thermal fault location.

Provides an instant solution by cooling circuitry down to -55°C .

It best locates dry joints and damaged electronic components like integrated circuits, diodes, etc.

It is helpful in fitting bearings and bushings as well as in dismantling clenched metal parts.

USE for testing:

- electronic parts and subassemblies
- thermostats in refrigeration equipment
- thermocontrol systems
- electronic elements of carburetors
- ignition systems
